- 1. In Windows 7, navigate to Start Button > Control Panel > System. In Windows 10, search forand skip to step 4.2. Press Advanced System Settings link

## 7. Select OK.

8. Change Power Options Settings (if you weren't prompted to do so after step 4): Make sure your office computer stays awake so it can respond to Remote Desktop Connection requests.

- 1. Power and sleep settings
- 2. In the Put the computer to sleep or Turn off after drop down menu, select Never.
- 3. In Windows 7, select Save Changes.
- 4. Note: Remember to leave your computer on when you leave. If you shut it down, you won't be able to connect.
- 9. Your Windows 7 PC can now be accessed using the Remote Desktop Client tool from another PC. In

## 10. At the command prompt

11. Scroll up to find the IPv4 Address. The address you need will be followed by (Preferred)

12.
